## PROFILE

---

He is a software architect, software designer and web developer in a J2EE environment. He has more than 16 years of experience in the analysis and development of information systems and in particular the last 12 years dedicated to web projects in a J2EE environment. In all these years he has acquired a very good knowledge of web technologies, and in particular Java. This has increased his autonomy to carry out the most appropriate architectural decisions based on the project type.

His role covers the entire life cycle of the software: analysis, architecture design and implementation up to the release to the customer.

He has also experience with the platform .NET and in particular with C # and ASP.NET4

## IT COMPETENCIES

---

- Operating systems: Windows for client and server, Linux-like
- Database: Oracle (expert level), SQL Server, MySQL (intermediate level)
